PROJECTS

YatriGhar – Full-Stack Hotel Booking Platform

- Built a full-featured travel and accommodation booking web app with a modern, responsive, and user-friendly interface, including hotel listings, real-time availability checks, booking management, and a robust admin dashboard.
- Developed secure user authentication and authorization using Clerk, and created a clean, scalable frontend with React and Tailwind CSS, focusing on performance and seamless user experience.
- Built backend APIs with Node.js & Express.js, managed data storage and relationships using MongoDB, and integrated Stripe for secure online payments.

<https://yatrighar.vercel.app>

Meubel House – Full-Stack Furniture E-Commerce Platform

- Developed a modern, fully responsive furniture e-commerce website with an attractive, user-friendly UI, including product listings, category filters, product detail pages, search functionality, and mobile-optimized layouts.
- Built scalable and reusable frontend components using React and styled the platform with Tailwind CSS, ensuring high performance, consistency, and a modern design across all pages.
- Developed secure and efficient backend APIs using Node.js & Express.js, managed product, category, user, and cart data in MongoDB, and implemented CRUD operations, API validation, error handling, and optimized queries for a smooth shopping experience.

LamaAI – AI Content Generation Platform

- Built an AI-powered platform offering text generation, summarization, and image creation, featuring a clean, responsive, and user-friendly interface.
- Developed secure authentication and scalable backend endpoints using Node.js, Express.js, and MongoDB, ensuring smooth API communication and efficient data management.
- Implemented reusable React components, integrated AI APIs, and optimized API usage for fast and accurate AI responses, providing a seamless content generation experience.
